playtop®  
SAFER SURFACING

A hygienic  
and practical  
alternative

## Durable, safe, practical EPDM Rubber Mulch by Playtop

Playtop EPDM Rubber Mulch is an exclusive Playtop product designed as an alternative to timber cushionfall.

Playtop EPDM Rubber Mulch is installed in conjunction with our recycled base layer so it can meet all the critical fall height requirements of our standard systems.

Timber cushionfall will always have its place as a great natural playground surface but in the following instances Playtop EPDM Rubber Mulch might be a preferred option.

- Where weather events make the constant replacement of timber cushionfall uneconomical.
- Uneven or sloped ground where timber cushionfall will not remain evenly spread.
- Indoor application where you want the look of timber cushionfall without the mess.

Used in conjunction with our poured in place shock pads, Playtop EPDM Rubber Mulch can meet all Critical fall height requirements of our Standard Safety Surfacing systems.

# Playtop EPDM Rubber Mulch

Playtop EPDM Rubber Mulch is optimally suitable for everyone who is looking for a durable, colour-resistant alternative to timber cushionfall. EPDM Rubber Mulch is manufactured as a virgin product and is 100% dyed through. This means that its colour doesn't 'wear out' - even after several years.

A recycled 'colour coated' rubber mulch might sound environmentally friendly but this means importing used tyre chip which has been colour coated. Because this coating does not last long term (rubbing/crawling areas) it will lose its esthetically pleasing appearance to a blackish 'rubbed off' look before the initial cost can be justified and it's eventual replacement becomes inevitable.

Playtop can supply and install recycled colour coated mulch at the insistence of the customer but do not recommend it.

## EPDM Rubber Mulch is 100% dyed through

### Consistent Safety

Depending on its installation height, EPDM Rubber Mulch can provide a protective function aligned to the required fall height when it is used in leisure and play areas.

### Flame-retardant

Flame retardant material suitable for indoor use.

### 100% dyed through and stable

EPDM Rubber Mulch surfaces remain colour and feature stable in every weather and when subject to considerable mechanical strain.

### Environmentally compatible & health friendly

EPDM Rubber Mulch consists 100% of a controlled virgin product and satisfies all of the relevant environmental requirements.

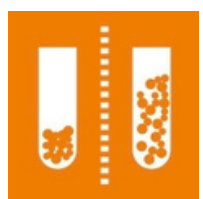

### Sustainable and economical

Very durable, no discharge, no follow up spreading, no hidden costs and therefore sustainable and economical.

### Barrier-free

EPDM Rubber Mulch is laid down joint-free and therefore offers the basis for limitless playing with out trip hazards or barriers.

### Long term, expedient use of resources

Due to the natural form of the material, EPDM Rubber Mulch achieves a superb bulk density.

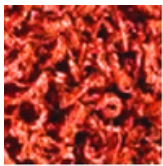

### Hygienic Virgin Product

Fungus and bacteria don't stand a chance. Unwanted soiling can be discovered and disposed of more quickly.
